

Smartape 4615

Double Sided Clear Nano Tape

ADHESIVE TAPE SPECIALISTS

A U G U S T 2 0 2 4
Supercedes all previous versions

This reusable multipurpose double sided clear tape suitable for a variety of indoor & outdoor applications.

Applications

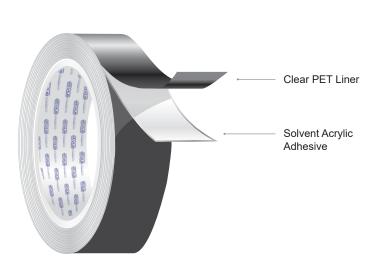

- Adheres to a wide variety of smooth surfaces such as glass, metal, plastic, marble, tiles & other substrates
- → Ideally suited for a variety of attachments such as lightweight shelves, picture frames, hooks & other similar storage solutions
- Ideal as an antislip pad, can be cut to any length to secure things such as carpets, furniture legs, mats etc to prevent sliding

- Can replace the need for mechanical fasteners
 &/or liquid adhesives
- → Washable & reusable
- → Holds up to 1kg
- → Temperature resistant -20°C to 80°C (long term)
 & up to 140°C (short term)
- → Long ageing & Non-toxic
- → Good UV resistance
- → Clean removal

Technical Data

 Adhesive type Solvent Acrylic Foam Type Soft/Medium Compliance Bohls & Reach Liner Type Density - kgs/m³ Temperature Resistance - °C -20 to 80 	Adhesive power	****	Foam Colour	Transparent
	Adhesive type	Solvent Acrylic	• Foam Type	Soft/Medium
• Density - kgs/m³ 800 • Temperature Resistance - °C -20 to 80	Compliance	RoHS & Reach	• Liner Type	50mic Clear PET

ADHESIVE TAPE SPECIALISTS

Application Instructions

- 1 Ensure the surface has been cleaned & is free from any contaminants. Refer to our Recommended Cleaning & Installation Procedures on our website.
- 2 Roll tape out and cut to required length.
- Stick tape onto surface ensuring all sides have been covered adequately. Press each strip down firmly.
- 4 Peel liner away to expose Second adhesive side.
- 5 Press each side firmly for at least 30 seconds to ensure a secure bond.

How to remove & reuse

- 1 Remove by slowly stretching one side of the tape. Do not pull away from the surface.
- 2 Wash tape under running water.
- Allow to fully air dry.

Recommended Storage Conditions

Product must be kept in its original box and packaging in a dry atmosphere away from direct sunlight.

The optimal storage conditions for this product is between 18°C - 22°C with a relative humidity of 40% - 50%.

Material Safety Data Sheet

MSDS can be downloaded from Stylus Tapes website www.stylustapes.com.au

Recommended Cleaning & Installation Procedures

STEP 1 - SURFACE EVALUATION:

There are numerous types of adhesive tapes, some suited to a variety of uses and others for more specialised individual applications. A thorough evaluation is recommended when bonding to any surface. Porous surfaces such as wood, concrete & brick should be smooth & sealed with an appropriate sealer prior to application. All adhesive tapes should only be applied to clean & dry surfaces. There are various methods of preparation depending on the surface and/or application. For technical advice we recommend you speak with our local sales office. Surfaces must be free of:

- Any Contaminants
- · Moisture & Chemical Residue
- Dust, Fibres, Concrete Powders, Sand, Soil & Dirt Particles
- O.E.M. Cleaners, Grease, Wax, Detergent & Release agents on plastic profiles/extrusions etc
- · Flaking Paint & Corrosion

STEP 2 - CLEANING INSTRUCTIONS:

The surface being applied to should be prepared with an appropriate cleaning solution, preferably IPA (Isopropanol) using a clean lint-free wiping cloth or disposable wipe (never re-cycled rags). Renew cleaning cloths regularly. (Applications involving paper, board, fabric etc do not requireIPA cleaning) This should be performed immediately prior to application of adhesive tape. When using any cleaning solutions it is recommended to test a small area to ensure there is no reaction/discolouration with the surface. It is important to note that all painted/sealed surfaces should be completely dry/cured. (Refer to manufactures recommendations).

STEP 3 - INSTALLATION PROCESS:

Once the surface has been adequately prepared tape application can commence. Care should be taken to avoid finger contact with adhesive. The portion of tape held by your fingers should overlap the area being applied to & trimmed, as finger contact with any adhesive tape will significantly reduce its performance. Both single & double sided tapes require sufficient rub down pressure to ensure 100% surface contact. Where double sided tapes are being used pressure must be re-applied after both surfaces have been brought together. Surface temperature should be above 10°C at time of application. (Use some heat if necessary - Hair Dryer, Fan Heater etc.).

NB. Storage - Ensure all tapes are stored in clean/dry condition & returned to the protective bagbetween use.

SPECIAL NOTE: Adhesive Bond Strength will improve with time varying from a few hours to 2-3 days depending on the adhesive tape product used & climactic conditions.
